

Digital Literacy Project Report

Name: Devang Sharma

Registration Number:25BAI10547

Branch: BTech CSE(AIML)

Year: 1st Year

Course Code: CSE0001

Date: 31 March 2026

Introduction

This project was completed as part of the Digital Literacy course. The main objective of this project is to develop essential digital skills that are important for students in today's world. As a Digital Ambassador, the goal is to help peers understand how to use digital platforms effectively, communicate professionally, and stay safe online.

The project includes five tasks covering different aspects such as creating an infographic, building a digital portfolio, exploring coding platforms, learning email etiquette, and understanding cybercrime. Through these activities, I gained practical knowledge about various digital tools and their importance in academic and professional life.

Task 1: Infographic

For this task, I created a digital literacy infographic using Canva. The infographic explains the meaning of digital literacy and highlights its importance for students. It includes topics such as useful digital tools, safe internet practices, and email etiquette.

The design was created using a clean layout with icons and short points to make it visually appealing and easy to understand. Canva provided useful templates and design elements that helped in creating a professional infographic.

One interesting part of this task was learning how to present information visually instead of writing long text. The challenging part was selecting relevant content and organizing it properly.

Overall, this task helped me improve my creativity and communication skills.

Task 2: Digital Portfolio

In this task, I created my digital portfolio by setting up profiles on GitHub, LinkedIn, and Kaggle. GitHub is used to store and share coding projects, LinkedIn is used for building a professional network, and Kaggle helps in learning data science and working with datasets.

I updated my GitHub profile and created a basic introduction. On LinkedIn, I added my education details including my degree and institution. On Kaggle, I created a profile to explore datasets and improve my skills.

These platforms will be useful for my future. I plan to use GitHub to showcase my projects, LinkedIn to connect with professionals, and Kaggle to enhance my technical knowledge. This task helped me understand the importance of maintaining a professional online presence.

Task 3: Platforms

In this task, I explored coding and collaboration platforms. I used HackerRank to solve a beginner-level problem called “Solve Me First.” This helped me understand how coding platforms work and how to practice programming skills.

I also created a Google Form titled “Digital Literacy Awareness Quiz.” The form includes five questions related to digital

literacy, online safety, and cyber awareness. It can be used to test the knowledge of students and spread awareness.

This task was very useful because it introduced me to important tools. HackerRank helps improve coding skills, while Google Forms helps in creating surveys and collecting data. These tools will be helpful in my academic journey.

Task 4: Email Etiquette

This task focused on professional communication through emails and responsible social media usage. I wrote two emails: one requesting an assignment extension and another applying for an internship. Both emails followed proper structure with subject line, greeting, body, and closing.

A situation where poor communication can cause problems is when a student sends an unclear or informal email to a professor. This may create a negative impression. To avoid this, it is important to use a formal tone and clear communication.

This task helped me understand the importance of professional communication.

Task 5: Cybercrime

In this task, I learned about cybercrime, specifically UPI fraud. I was surprised to see how easily people can be tricked into sharing sensitive information such as OTPs or approving payment requests.

One important habit I will change is being more careful while making online transactions. I will avoid clicking on unknown links and will never share personal information with anyone.

This task increased my awareness about online safety and cyber threats.

Conclusion

This project helped me understand the importance of digital literacy in today's world. I learned how to use different platforms, communicate professionally, and stay safe online.

Overall, this project improved my confidence in using digital tools and made me more aware of digital safety. These skills will be very useful in my academic and professional life.
